Aerial Research

Aerial photography from an unmanned carrier

Introduction

- We provide services and technology for low altitude (0 - 200 m) aerial photography from an unmanned carrier.
- Our technology can take pictures from places impossible before.
- The picture maintains detail and perspective.
- The image is in real time transmitted into a ground station allowing immediate picture verification.
- Our final product is a printed or an electronic photo-documentation.

Services

- Aerial photography - data for presentations, documentation and advertisement
- Data for survey, geology, mapping
- Photo-reconnaissance
- Documentation of constructions and transport facilities
- Aerial data for construction rework, building and industrial areas
- Deliver of the technology - lease, assistance, support and training
